EXPERIENCE

Dantown — *Front end Developer*

JANUARY 2021 – APRIL 2022 (1 year 3 months)

I worked as the full stack developer for this fintech startup.

I worked with technologies like react js, redux and next js.

I was among the great team of developers that worked endlessly to make sure the product was just as the executives wanted it, if not better.

Alabipal — *Full stack Developer*

MAY 2019 – NOVEMBER 2020 (1 year 5 months)

This was a small company that specialized in the development of betting websites for betting companies. I helped the team take part in building and maintaining full stack applications for various book maker websites.

I worked closely with React JS and Django with Flask occasionally.

Self Employed — *Freelance web developer*

JUNE 2018 – FEBRUARY 2019 (8 months)

Before getting a full time position, I was a freelancer mostly building websites using technologies like HTML, CSS, vanilla JavaScript, php, wordpress and even python.

I also built desktop apps using python tKinter and occasionally pyQT5.

SKILLS

Python

React JS

Next JS

JavaScript

WordPress

Redux Toolkit

Django

Web Scraping

Web Automation

EXPERIENCES CONTINUED

Excellent Digital Enterprise — *Volunteer Programming Tutor*

JANUARY 2021 – MAY 2021 (8 months)

I worked part time as a volunteer teaching assistant to mentor a few interested people about the beauties of software engineering.

AudioPhile e-Commerce Website

React JS, CSS, Formik, Yup validations

https://my-audiophile.netlify.app/ (Live site)

An eCommerce website for basic audio gadgets. It has all the functionality a normal eCommerce site should have including adding to cart, editing items in cart, removing items from cart, form validation, etc. Since the UX was not too great, I decided to add my own style to make the UX better.

GPT-3 Modern UI Website

React JS, CSS, BEM, Figma

https://gtp3-modern-react-site.netlify.app/ (Live site)

A very nice looking website with a modern UI. I built the website from a figma file and I had a great time building it.

Invoice App

Python, tkinter, Flask, CSS, Postgres, REST API.

https://bit.ly/3unHhno (App preview)

A simple and basic invoice app I created to help staff of a company keep track of the finances. It has authentication and full CRUD capabilities. Deleting an invoice however, is done only by the admin for security reasons.
